

## Fork Positioner for Forklifts

Forklift Fork Positioner - A fork positioner is a tool made out of top quality materials meant to endure the most challenging procedures and work environments. This particular piece of equipment enables the person driving to control the forks hydraulically without leaving the seat. Side shifting units have the added ability to laterally position the arms or the entire load in order to facilitate much more exact carrying and placement in a faster and much more efficient method.

The only one of its kind fork pocket design could enable the one operating it to be able to securely sway the unit's blades without any fear of damaging the positioning cylinders. This could allow the operator the option to either perform simultaneous or independent blade movement, depending on the job requirement. For most lift trucks with non-OEM carriages, complete carriages are considered necessary. Standard OEM carriages can be transformed into blade positioners on existing units.
